Abstract. In this paper, we introduce modal type operators over interval valued intuitionistic fuzzy sets of second type and establish some of their properties.

Keywords: Intuitionistic fuzzy sets, intuitionistic fuzzy sets of second type, interval valued fuzzy sets, interval valued intuitionistic fuzzy sets, interval valued intuitionistic fuzzy sets of second type.

AMS Mathematics Subject Classification (2010): 03E72

1. Introduction
An intuitionistic fuzzy set for a given underlying set $x$ where introduced by Atanassov [2] which is the generalization of ordinary fuzzy sets. Atanassov and Gargov [3] further introduced the concepts of interval valued intuitionistic fuzzy set. The present authors further introduced the new extension of IVIFS namely interval valued intuitionistic fuzzy sets of second type (IVIFSST) and established some of their properties [4]. The rest of the paper is designed as follows: In Section 2, we give some basic definitions. In Section 3, we introduce modal type operators over interval valued intuitionistic fuzzy sets of second type and establish some of their properties. This paper is concluded in section 4.

2. Preliminaries
In this section, we give some basic definitions.

Definition 2.1. [2] Let $X$ be a non-empty set. An Intuitionistic Fuzzy Set (IFS) $A$ in $X$ is defined as an object of the following form.

$$A = \{(x, \mu_A(x), \nu_A(x)) | x \in X\}$$

where the functions $\mu_A: X \rightarrow [0,1]$ and $\nu_A: X \rightarrow [0,1]$ denote the degree of membership and the degree of non-membership of the element $x \in X$, respectively, and for every $x \in X$.

$$0 \leq \mu_A(x) + \nu_A(x) \leq 1$$

Definition 2.2. [2] Let a set $X$ be fixed. An intuitionistic fuzzy sets of second type (IFSSST) $A$ in $X$ is defined as an object of the following form.

$$A = \{(x, \mu_A(x), \nu_A(x)) | x \in X\}$$

where the functions $\mu_A: X \rightarrow [0,1]$ and $\nu_A: X \rightarrow [0,1]$ denote the degree of membership and the degree of non-membership of the element $x \in X$, respectively, and for every $x \in X$.

$$0 \leq \mu_A(x) + \nu_A(x) \leq 1$$
and the degree of non-membership of the element \( x \in X \), respectively, and for every \( x \in X \). 
\[
0 \leq \mu_A(x) + \nu_A(x) \leq 1
\]

**Definition 2.3.** [3] An interval valued intuitionistic fuzzy sets (IVIFS) \( A \) in \( X \) is given by 
\[
A = \{(x, M_A(x), N_A(x)) | x \in X \}
\]
where \( M_A : X \rightarrow [0, 1] \), \( N_A : X \rightarrow [0, 1] \). The intervals \( M_A(x) \) and \( N_A(x) \) denote the degree of membership and the degree of non-membership of the element \( x \in X \), where \( M_A(x) = [M_{AL}(x), M_{AU}(x)] \) and \( N_A(x) = [N_{AL}(x), N_{AU}(x)] \) with the condition that 
\[
M_{AU}(x) + N_{AU}(x) \leq 1 \quad \forall x \in X
\]

**Definition 2.4.** [4] An interval valued intuitionistic fuzzy sets of second type \( A \) in \( X \) is given by 
\[
A = \{(x, M_A(x), N_A(x)) | x \in X \}
\]
where \( M_A : X \rightarrow [0, 1] \), \( N_A : X \rightarrow [0, 1] \). The intervals \( M_A(x) \) and \( N_A(x) \) denote the degree of membership and the degree of non-membership of the element \( x \in X \), where \( M_A(x) = [M_{AL}(x), M_{AU}(x)] \) and \( N_A(x) = [N_{AL}(x), N_{AU}(x)] \) with the condition that 
\[
M^2_{AL}(x) + N^2_{AU}(x) \leq 1 \quad \forall x \in X.
\]

**Definition 2.5.** [4] For every two IVIFSST \( A \) and \( B \), we have the following relations and operations:
1. \( A \subseteq B \) iff \( M_{AU}(x) \leq M_{BU}(x) \& M_{BL}(x) \leq M_{BL}(x) \) and \( N_{AU}(x) \geq N_{BU}(x) \& N_{BL}(x) \geq N_{BL}(x) \)
2. \( A = B \) iff \( A \subseteq B \) and \( B \subseteq A \)
3. \( \bar{A} = \{(x, [N_{AL}(x), N_{AU}(x)], [M_{AL}(x), M_{AU}(x)]) | x \in X \} \)
4. \( A \cup B = \{(x, \max(M_{AL}(x), M_{BL}(x)), \max(M_{AU}(x), M_{BU}(x)), \min(N_{AL}(x), N_{BL}(x)), \min(N_{AU}(x), N_{BU}(x))) | x \in X \} \)
5. \( A \cap B = \{(x, \max(M_{AL}(x), M_{BL}(x)), \max(M_{AU}(x), M_{BU}(x)), \min(N_{AL}(x), N_{BL}(x)), \max(N_{AU}(x), N_{BU}(x))) | x \in X \} \)

**Definition 2.6.** [5] For every IVIFSST, we define the following operators:
- Necessity operator 
  \[
  \Box A = \{(x, [M_{AL}(x), M_{AU}(x)], [N_{AL}(x), \sqrt{1 - M^2_{AU}(x)}]) | x \in X \}
  \]
- Possibility operator 
  \[
  \Diamond A = \{(x, [M_{AL}(x), \sqrt{1 - N^2_{AU}(x)}], [N_{AL}(x), N_{AU}(x)]) | x \in X \}
  \]

**Definition 2.7.** [5] Given an IVIFSST \( A \) and for every \( \alpha, \beta \in [0, 1] \), we define the operators \( D_{\alpha} \) and \( F_{\alpha, \beta} \):
\[
D_{\alpha}(A) = \left\{ x, \left[ M_{AL}(x), \sqrt{M^2_{AU}(x) + \alpha^2(1 - M^2_{AU}(x) - N^2_{AU}(x))} \right], \left[ N_{AL}(x), \sqrt{N^2_{AU}(x) + (1 - \alpha)^2(1 - M^2_{AU}(x) - N^2_{AU}(x))} \right] | x \in X \right\}
\]

254
Modal Type Operators over Interval Valued Intuitionistic Fuzzy Sets of Second Type

\[ F_{\alpha,\beta}(A) = \left\{ x, \left[ M_{AL}(x), \sqrt{M^2_{AU}(x) + \alpha^2 \left( 1 - M^2_{AU}(x) - N^2_{AU}(x) \right)} \right], \right. \]
\[ \left. \left[ N_{AL}(x), \sqrt{N^2_{AU}(x) + \beta^2 \left( 1 - M^2_{AU}(x) - N^2_{AU}(x) \right)} \right] \right\} | x \in X \]

3. Modal type operators on IVIFSST

In this section, we define the new modal type operators over IVIFSST and also we establish some of their properties.

**Definition 3.1.** Given an IVIFSST \( A \) and for every \( \alpha, \beta \in [0,1] \), we define the operators \( G_{\alpha,\beta} \), \( H_{\alpha,\beta} \) and \( J_{\alpha,\beta} \)

(i). \( G_{\alpha,\beta}(A) = \{(x, [\alpha M_{AL}(x), \alpha M_{AU}(x)], [\beta N_{AL}(x), \beta N_{AU}(x)]) | x \in X \} \)
(ii). \( H_{\alpha,\beta}(A) = \{(x, [\alpha M_{AL}(x), \alpha M_{AU}(x)], \right.\]
\[ \left. \left[ N_{AL}(x), \sqrt{N^2_{AU}(x) + \beta^2 \left( 1 - M^2_{AU}(x) - N^2_{AU}(x) \right)} \right] \right\} | x \in X \}
(iii). \( J_{\alpha,\beta}(A) = \left\{ x, \left[ M_{AL}(x), \sqrt{M^2_{AU}(x) + \alpha^2 \left( 1 - M^2_{AU}(x) - N^2_{AU}(x) \right)} \right], \right.\]
\[ \left. \left[ \beta N_{AL}(x), \beta N_{AU}(x) \right] \right\} | x \in X \}

**Definition 3.2.** Given an IVIFSST \( A \) and for every \( \alpha, \beta \in [0,1] \), we define the operators \( H^*_{\alpha,\beta} \) and \( J^*_{\alpha,\beta} \)

(i). \( H^*_{\alpha,\beta}(A) = \{(x, [\alpha M_{AL}(x), \alpha M_{AU}(x)], \right.\]
\[ \left. \left[ N_{AL}(x), \sqrt{N^2_{AU}(x) + \beta^2 \left( 1 - \alpha^2 M^2_{AU}(x) - N^2_{AU}(x) \right)} \right] \right\} | x \in X \}
(ii). \( J^*_{\alpha,\beta}(A) = \left\{ x, \left[ M_{AL}(x), \sqrt{M^2_{AU}(x) + \alpha^2 \left( 1 - M^2_{AU}(x) - \beta^2 N^2_{AU}(x) \right)} \right], \right.\]
\[ \left. \left[ \beta N_{AL}(x), \beta N_{AU}(x) \right] \right\} | x \in X \}

**Proposition 3.1.** Let \( X \) be a non-empty set. For every IVIFSST \( A \) and for every \( \alpha, \beta \in [0,1] \) we have the following

(i). \( H_{\alpha,\beta}(A) = J_{\beta,\alpha}(A) \)
(ii). \( J_{\alpha,\beta}(A) = H_{\beta,\alpha}(A) \)
(iii). \( H_{1,0}(A) = J_{0,1}(A) = G_{1,1}(A) \)

**Proof:** Let \( A = \{(x, [M_{AL}(x), M_{AU}(x)], [N_{AL}(x), N_{AU}(x)]) | x \in X \} \),
Then,
\[ \bar{A} = \{(x, [N_{AL}(x), N_{AU}(x)], [M_{AL}(x), M_{AU}(x)]) | x \in X \}, \]
\[ G_{\alpha,\beta}(A) = \{(x, [\alpha M_{AL}(x), \alpha M_{AU}(x)], [\beta N_{AL}(x), \beta N_{AU}(x)]) | x \in X \}, \]

255
K. Rajesh and R. Srinivasan

\[ \begin{align*}
H_{\alpha, \beta}(A) &= \{(x, [\alpha M_{AL}(x), \alpha M_{AU}(x)], N_{AL}(x), \sqrt{N_{AL}(x)^2 + \beta^2(1 - M_{AU}(x) - N_{AU}(x))}) | x \in X \} \\
J_{\alpha, \beta}(A) &= \{x, M_{AL}(x), \sqrt{M_{AL}(x)^2 + \alpha^2(1 - M_{AU}(x) - N_{AU}(x))}, \beta N_{AL}(x), \beta N_{AU}(x)) | x \in X \}
\end{align*} \]

Now

\[ \begin{align*}
H_{\alpha, \beta}(\tilde{A}) &= \{(x, [\alpha N_{AL}(x), \alpha N_{AU}(x)], M_{AL}(x), \sqrt{M_{AL}(x)^2 + \beta^2(1 - M_{AU}(x) - N_{AU}(x))}) | x \in X \} \\
\overline{H_{\alpha, \beta}}(\tilde{A}) &= \{x, M_{AL}(x), \sqrt{M_{AL}(x)^2 + \alpha^2(1 - M_{AU}(x) - N_{AU}(x))}, [\alpha N_{AL}(x), \alpha N_{AU}(x)) | x \in X \}
\end{align*} \]

This is (i)

(ii) \( J_{\alpha, \beta}(\tilde{A}) = \{x, N_{AL}(x), \sqrt{N_{AL}(x)^2 + \alpha^2(1 - M_{AU}(x) - N_{AU}(x))}, \beta M_{AL}(x), \beta M_{AU}(x)) | x \in X \}

\[ \begin{align*}
\overline{J_{\alpha, \beta}}(\tilde{A}) &= \{(x, [\beta M_{AL}(x), \beta M_{AU}(x)], N_{AL}(x), \sqrt{N_{AL}(x)^2 + \alpha^2(1 - M_{AU}(x) - N_{AU}(x))}) | x \in X \}
\end{align*} \]

\[ \begin{align*}
H_{\beta, \alpha}(A) = \overline{J_{\alpha, \beta}}(\tilde{A})
\end{align*} \]

Therefore,

\[ \begin{align*}
\overline{J_{\alpha, \beta}}(\tilde{A}) &= H_{\beta, \alpha}(A)
\end{align*} \]

(iii) Let \( A = \{(x, [M_{AL}(x), M_{AU}(x)], N_{AL}(x), N_{AU}(x)) | x \in X \} \).

Then,

\[ \begin{align*}
\tilde{A} &= \{(x, [N_{AL}(x), N_{AU}(x)], [M_{AL}(x), M_{AU}(x))] | x \in X \} \\
\overline{H_{\alpha, \beta}}(\tilde{A}) &= \{(x, [\alpha N_{AL}(x), \alpha N_{AU}(x)], M_{AL}(x), \sqrt{M_{AL}(x)^2 + \beta^2(1 - M_{AU}(x) - N_{AU}(x))}) | x \in X \}
\end{align*} \]

\[ \begin{align*}
\overline{\overline{H_{\alpha, \beta}}}(\tilde{A}) &= \{x, M_{AL}(x), \sqrt{M_{AL}(x)^2 + \beta^2(1 - M_{AU}(x) - N_{AU}(x))}, \beta M_{AL}(x), \beta M_{AU}(x)) | x \in X \}
\end{align*} \]
Modal Type Operators over Interval Valued Intuitionistic Fuzzy Sets of Second Type

\[ [\alpha N_{AL}(x), \alpha N_{AU}(x)] \mid x \in X \]

Put \( \alpha = 1 \) and \( \beta = 0 \) in \( \overline{H_{\alpha,\beta}(A)} \)

\[
\overline{H_{1,0}(A)} = \left\{ x, \left[ M_{AL}(x), \sqrt{M^2_{AU}(x) + \alpha^2 (1 - M^2_{AU}(x) - N^2_{AU}(x))}\right], \left[ 1N_{AL}(x), 1N_{AU}(x) \right] \mid x \in X \right\}.
\]

(1)

\[
J_{\alpha,\beta}(A) = \left\{ (x, [N_{AL}(x), N_{AU}(x)]) \mid x \in X \right\}
\]

(2)

\[
\overline{J_{0,1}(A)} = \left\{ (x, [1N_{AL}(x), 1N_{AU}(x)]) \mid x \in X \right\}
\]

(3)

\[
G_{\alpha,\beta}(A) = \left\{ (x, [\alpha N_{AL}(x), \alpha N_{AU}(x)], [\beta N_{AL}(x), \beta N_{AU}(x)]) \mid x \in X \right\}
\]

Put \( \alpha = 1 \) and \( \beta = 1 \) in \( \overline{J_{0,1}(A)} \) we have

\[
G_{1,1}(A) = \left\{ (x, [M_{AL}(x), M_{AU}(x)], [N_{AL}(x), N_{AU}(x)]) \mid x \in X \right\}
\]

From (1), (2) and (3) we have

\[
\overline{H_{1,0}(A)} = \overline{J_{0,1}(A)} = G_{1,1}(A)
\]

Proposition 3.2. Let \( X \) be a non-empty set. For every IVIFSST \( A \) and for every \( \alpha, \beta \in [0,1] \) we have the following

(i). \( \overline{H^*_{\alpha,\beta}(A)} = J^*_{\beta,\alpha}(A) \)

(ii). \( \overline{J^*_{\alpha,\beta}(A)} = \overline{H^*_{\beta,\alpha}(A)} \)

Proof: Let \( A = \left\{ (x, [M_{AL}(x), M_{AU}(x)], [N_{AL}(x), N_{AU}(x)]) \mid x \in X \right\} \)

257
Then,
\[ \bar{A} = \{ (x, [N_{AL}(x), N_{AU}(x), [M_{AL}(x), M_{AU}(x)]) | x \in X \}. \]

\[
H^*_{\alpha, \beta}(A) = \left\{ (x, [\alpha M_{AL}(x), \alpha M_{AU}(x), \sqrt{N_{AL}(x) + \beta^2(1 - \alpha^2 M_{AU}(x) - N_{AU}(x))}) | x \in X \right\},
\]

\[
J^*_{\alpha, \beta}(A) = \left\{ (x, M_{AL}(x), \sqrt{M_{AU}(x) + \alpha^2 (1 - M_{AU}(x) - \beta^2 N_{AU}(x))}) | x \in X \right\},
\]

\[
H^*_{\alpha, \beta}(A) = \left\{ (x, [\alpha N_{AL}(x), \alpha N_{AU}(x), \sqrt{M_{AL}(x), \sqrt{M_{AU}(x) + \alpha^2 (1 - \beta^2 M_{AU}(x) - N_{AU}(x))}) | x \in X \right\},
\]

and
\[
J^*_{\alpha, \beta}(A) = \left\{ (x, [N_{AL}(x), \sqrt{N_{AU}(x) + \alpha^2 (1 - \beta^2 M_{AU}(x) - N_{AU}(x))}) | x \in X \right\},
\]

(i) \[
H^*_{\alpha, \beta}(A) = \left\{ (x, [M_{AL}(x), \sqrt{M_{AU}(x) + \beta^2 (1 - M_{AU}(x) - \alpha^2 N_{AU}(x))}) | x \in X \right\},
\]

\[
J^*_{\alpha, \beta}(A) = \left\{ (x, [N_{AL}(x), \sqrt{N_{AU}(x) + \alpha^2 (1 - M_{AU}(x) - \beta^2 N_{AU}(x))}) | x \in X \right\},
\]

Therefore,
\[
\overline{H^*_{\alpha, \beta}(A)} = \overline{J^*_{\alpha, \beta}(A)}
\]

(ii) \[
J^*_{\alpha, \beta}(A) = \left\{ (x, [N_{AL}(x), \sqrt{N_{AU}(x) + \alpha^2 (1 - \beta^2 M_{AU}(x) - N_{AU}(x))}) | x \in X \right\},
\]

\[
\overline{J^*_{\alpha, \beta}(A)} = \left\{ (x, [\beta M_{AL}(x), \beta M_{AU}(x), \sqrt{N_{AL}(x), \sqrt{N_{AU}(x) + \alpha^2 (1 - \beta^2 M_{AU}(x) - N_{AU}(x))}) | x \in X \right\},
\]

Therefore,
\[
\overline{J^*_{\alpha, \beta}(A)} = \overline{H^*_{\alpha, \beta}(A)}
\]

Proposition 3.3. Let \( X \) be a non-empty set. For every IVIFSST \( A \) and for every \( \alpha, \beta \in [0,1] \) we have the following
Modal Type Operators over Interval Valued Intuitionistic Fuzzy Sets of Second Type

i. \( H^*_{\alpha,\beta}(A) = F_{0,\beta} \left( G_{\alpha,1}(A) \right) \)

ii. \( J^*_{\alpha,\beta}(A) = F_{\beta,0} \left( G_{1,\alpha}(A) \right) \)

**Proof:** Let \( A = \{(x, [M_{AL}(x), M_{AU}(x)], [N_{AL}(x), N_{AU}(x)])| x \in X \} \), Then,

\[
\tilde{A} = \{(x, [N_{AL}(x), N_{AU}(x)], [M_{AL}(x), M_{AU}(x)])| x \in X \},
\]

\[
F_{\alpha,\beta}(A) = \left\{ x, \left[ M_{AL}(x), \sqrt{M_{AU}(x)} + \alpha^2 \left( 1 - M_{AU}(x) - N_{AU}(x) \right) \right], \left[ N_{AL}(x), \sqrt{N_{AU}(x)} + \beta^2 \left( 1 - M_{AU}(x) - N_{AU}(x) \right) \right] | x \in X \right\},
\]

\[
G_{\alpha,\beta}(A) = \{(x, [\alpha M_{AL}(x), \alpha M_{AU}(x)], [\beta N_{AL}(x), \beta N_{AU}(x)])| x \in X \},
\]

\[
H^*_{\alpha,\beta}(A) = \{(x, [\alpha M_{AL}(x), \alpha M_{AU}(x)], \left[ N_{AL}(x), \sqrt{N_{AU}(x)} + \beta^2 \left( 1 - \alpha^2 M_{AU}(x) - \alpha^2 N_{AU}(x) \right) \right]) | x \in X \},
\]

\[
J^*_{\alpha,\beta}(A) = \left\{ x, \left[ M_{AL}(x), \sqrt{M_{AU}(x)} + \alpha^2 \left( 1 - M_{AU}(x) - \alpha^2 N_{AU}(x) \right) \right], \left[ \beta N_{AL}(x), \beta N_{AU}(x) \right] | x \in X \right\}.
\]

(i). Put \( \beta = 1 \) in \( G_{\alpha,\beta}(A) \) we have
\( G_{1,1}(A) = \{(x, [\alpha M_{AL}(x), \alpha M_{AU}(x)], [\beta N_{AL}(x), \beta N_{AU}(x)])| x \in X \} \)

Again put \( \alpha = 0 \) in \( F_{\alpha,\beta}(A) \) we have
\( F_{0,\beta}(A) = \{(x, [M_{AL}(x), M_{AU}(x)], \left[ N_{AL}(x), \sqrt{N_{AU}(x)} + \beta^2 \left( 1 - M_{AU}(x) - N_{AU}(x) \right) \right]) | x \in X \}, \)

\[
F_{0,\beta} \left( G_{1,\alpha}(A) \right) = \{(x, [\alpha M_{AL}(x), \alpha M_{AU}(x)], \left[ N_{AL}(x), \sqrt{N_{AU}(x)} + \beta^2 \left( 1 - \alpha^2 M_{AU}(x) - \alpha^2 N_{AU}(x) \right) \right]) | x \in X \}
\]

From \( H^*_{\alpha,\beta}(A) \) and \( F_{0,\beta} \left( G_{1,\alpha}(A) \right) \) we have
\( H^*_{\alpha,\beta}(A) = F_{0,\beta} \left( G_{\alpha,1}(A) \right) \)

(ii). Put \( \alpha = \beta \) and \( \beta = \alpha \) in \( J^*_{\alpha,\beta}(A) \) we have
\( J^*_{\alpha,\beta}(A) = \left\{ x, \left[ M_{AL}(x), \sqrt{M_{AU}(x)} + \beta^2 \left( 1 - M_{AU}(x) - \alpha^2 N_{AU}(x) \right) \right], \left[ \alpha N_{AL}(x), \alpha N_{AU}(x) \right] | x \in X \right\} \)

put \( \alpha = 1 \) and \( \beta = \alpha \) in \( G_{1,\alpha}(A) \) we have

259
K. Rajesh and R. Srinivasan

\[ G_{1,\alpha}(A) = \{ (x, [M_{AL}(x), M_{AU}(x)], [\alpha N_{AL}(x), \alpha N_{AU}(x)]) | x \in X \} \]

Put \( \alpha = \beta \) and \( \beta = 0 \) in \( F_{\alpha,\beta}(A) \) we have

\[ F_{\beta,0}(A) = \left\{ x, \left[ M_{AL}(x), \sqrt{M_{AU}(x)^2 + \beta^2 (1 - M_{AU}(x)^2 - N_{AU}(x)^2)} \right], [N_{AL}(x), N_{AU}(x)] | x \in X \right\} \]

Now

\[ F_{\beta,0} \left( G_{1,\alpha}(A) \right) = \left\{ x, \left[ M_{AL}(x), \sqrt{M_{AU}(x)^2 + \beta^2 (1 - M_{AU}(x)^2 - \alpha^2 N_{AU}(x)^2)} \right], \left[ \alpha N_{AL}(x), \alpha N_{AU}(x) \right] | x \in X \right\} \]

From \( J_{\beta,\alpha}(A) \) and \( F_{\beta,0} \left( G_{1,\alpha}(A) \right) \) we have

\[ F_{\beta,0} \left( G_{1,\alpha}(A) \right) = J_{\beta,\alpha}(A) \]

4. Conclusion

We have introduced modal type operators \( G_{\alpha,\beta}, J_{\alpha,\beta}, H_{\alpha,\beta} \) and \( J_{\alpha,\beta}^* \) over IVIFSST also we established some of their properties. It is still open to define some more operators over IVIFSST.
