#### Abstract

A labeled graph G which can be gracefully numbered is said to be graceful. Labeling the nodes of $G$ with distinct nonnegative integers and then labeling the e edges of $G$ with the absolute differences between node values, if the graph edge numbers run from 1 to e, the graph G is gracefully numbered. In this paper, we have discussed the gracefulness of a few graphs formed from various combinations of some bicyclic graphs.

Keywords: Labeling; Graceful graph; Bicyclic graph

## AMS Mathematics Subject Classification (2010): 05C78

## 1. Introduction

We consider only finite, simple and undirected labeled graphs here. Labeled graphs form useful models for a wide range of applications such as coding theory, X-ray crystallography, radar, astronomy, circuit design, communication network addressing and database management

An graceful labeling $f$ of a graph $G$ with $q$ edges is an injective function from the vertices of $G$ to the set $\{0,1,2, \ldots, q\}$ such that when each edge $x y$ is assigned the label $|f(x)-f(y)|$, the resulting edge labels are distinct and nonzero. The concept above was put forward by Rosa in 1967.

All trees are graceful by the Ringel-Kotzig conjecture. Among the trees known to be graceful are caterpillars, trees with at most 4 -end vertices, trees with diameter at most 5 , trees with at most 35 vertices, symmetrical trees, regular olive trees, lobsters, firecrackers, banana trees and bamboo trees.

Graphs consisting of any number of pair wise disjoint paths with common end vertices are called generalized theta graphs. Various labelings have been found for these graphs.

In this paper, some new classes of graphs have been constructed by combining some theta graphs, path graphs with the star graphs $\operatorname{St}(\mathrm{n}),(n \geq 1)$. Our notations and terminology are as in [1]. We refer to [2] for some basic concepts.

## 2. Some results on the gracefulness of various bicyclic graphs

Definition 2.1. The theta graph $\theta(\alpha, \beta, \gamma)$ consists of three edge disjoint paths of lengths $\alpha, \beta$, and $\gamma$ having the same end points. Let the theta graph $\theta(2,2,3)$ have the paths $\mathrm{P}_{1}: \mathrm{v}_{2}, \mathrm{v}_{1}, \mathrm{v}_{5} ; \mathrm{P}_{2}: \mathrm{v}_{2}, \mathrm{v}_{6}, \mathrm{v}_{5}$ and $\mathrm{P}_{3}: \mathrm{v}_{2}, \mathrm{v}_{3}, \mathrm{v}_{4}, \mathrm{v}_{5}$.

Definition 2.2. Let $A$ be any graph. Let $B$ and $C$ be any tree graphs. $A_{i j} @(B, C)$ denotes a new graph formed by attaching a center vertex of $B$ to a vertex $v_{i}$ of $A$ by means of an edge and a center vertex of $C$ to a vertex $v_{j}$ of $A$ by means of an edge, where $i$ and $j$ are distinct.

Definition 2.3. A graph with two cycles having $p$ vertices and $(p+1)$ edges is called a bicyclic graph.

Theorem 2.4. $\theta_{\alpha \beta}(2,2,3) @(\operatorname{St}(\mathrm{~m}), \mathrm{St}(\mathrm{n}))$ is graceful, for $\mathrm{m}=\mathrm{n}$ and $\mathrm{m}, \mathrm{n} \geq 1$.
Proof. Consider the theta graph $\theta(2,2,3)$ with 6 vertices $v_{1}, v_{2}, \ldots, v_{6}$. Let $\operatorname{St}(\mathrm{m})$ be a star graph with $(m+1)$ vertices $w, w_{1}, w_{2}, \ldots, w_{m}$ for $m \geq 1$, where $w$ is the center vertex and $\mathrm{w}_{1}, \mathrm{w}_{2}, \ldots, \mathrm{w}_{\mathrm{m}}$ are pendant vertices.

Label the star graph $\operatorname{St}(\mathrm{n})$ on ( $\mathrm{n}+1$ ) vertices, by naming the vertices $\mathrm{u}, \mathrm{u}_{1}, \mathrm{u}_{2}, \ldots, \mathrm{u}_{\mathrm{n} .}(\mathrm{n} \geq 1)$. Here u is the center vertex and the other vertices are pendant vertices. To form the bicyclic graph $G=\theta_{\alpha \beta}(2,2,3) @(\operatorname{St}(\mathrm{~m}), \operatorname{St}(\mathrm{n}))$ attach the vertex w of $\operatorname{St}(\mathrm{m})$ with a vertex $\mathrm{v}_{\alpha}(1 \leq \alpha \leq 6)$ of $\theta(2,2,3)$ by an edge $\mathrm{wv}_{\alpha}$ and attach the vertex $u$ of $\operatorname{St}(\mathrm{n})$ with a vertex $\mathrm{v}_{\beta}(1 \leq \beta \leq 6)$ of $\theta(2,2,3)$ by an edge $\mathrm{wv}_{\beta}$, for distinct $\alpha$ and $\beta$. G has $\mathrm{m}+\mathrm{n}+8$ vertices and $\mathrm{m}+\mathrm{n}+9$ edges. Let m and n be equal.

The vertex set $\mathrm{V}(\mathrm{G})=\left\{\mathrm{u}, \mathrm{w}, \mathrm{v}_{\mathrm{i}}, \mathrm{w}_{\mathrm{j}}, \mathrm{u}_{\mathrm{k}} / \mathrm{i}=1,2, \ldots, 6, \mathrm{j}=1,2, \ldots, \mathrm{~m}, \mathrm{k}=1,2, \ldots, \mathrm{n}\right\}$. The edge set $E(G)=\left\{v_{i} v_{i+1} / i=1,2, \ldots, 5\right\} \cup\left\{v_{i} v_{i+4} / i=1,2\right\} \cup\left\{w_{j} / j=1,2, \ldots, m\right\}$ $\cup\left\{\mathrm{uu}_{\mathrm{k}} / \mathrm{k}=1,2, \ldots, \mathrm{n}\right\} \cup\left\{\mathrm{v}_{\mathrm{i}} \mathrm{w}, \mathrm{v}_{\mathrm{j}} \mathrm{u} / \mathrm{i}, \mathrm{j}=1\right.$ or 2 or 3 or 4 or 5 or 6 and $\left.\mathrm{i} \neq \mathrm{j}\right\}$.

Let $f$ be the labeling on the set of vertices of $G$ and $g$ be the induced labeling on the set of edges of $G$. The vertex label set of $G$ can be written as AUBUCUI where $A=\left\{f\left(v_{i}\right) / \mathrm{i}=1,2, \ldots, 6\right\}, B=\left\{\mathrm{f}\left(\mathrm{w}_{\mathrm{j}}\right) / \mathrm{j}=1,2, \ldots, \mathrm{~m}\right\}, \mathrm{C}=\left\{\mathrm{f}\left(\mathrm{u}_{\mathrm{k}}\right) / \mathrm{k}=1,2, \ldots, \mathrm{n}\right\}$, $\mathrm{I}=\{\mathrm{f}(\mathrm{u}), \mathrm{f}(\mathrm{w})\}$.

The edge label set of $G$ can be written as DUEUFUGUH where $D=\left\{g\left(v_{i} v_{i+1}\right) /\right.$ $\mathrm{i}=1,2, \ldots, 5\}, \mathrm{E}=\left\{\mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right) / \mathrm{i}=1,2\right\}, \mathrm{F}=\left\{\mathrm{g}\left(\mathrm{ww}_{\mathrm{j}}\right) / \mathrm{j}=1,2, \ldots, \mathrm{~m}\right\}, \mathrm{G}=\left\{\mathrm{g}\left(\mathrm{u} u_{\mathrm{k}}\right) / \mathrm{k}=1,2, \ldots, \mathrm{n}\right\}$, $\mathrm{H}=\left\{\mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{w}\right), \mathrm{g}\left(\mathrm{v}_{\mathrm{j}} \mathrm{u}\right) / \mathrm{i}, \mathrm{j}=1\right.$ or 2 or 3 or 4 or 5 or 6 and $\left.\mathrm{i} \neq \mathrm{j}\right\}$. Consider all the cases up to isomorphism.

Case 1. $\alpha=1, \beta=4$.
Let the labeling $f$ on the vertices of $G$ be defined by $f\left(v_{i}\right)=i+1$ for $i=1$; $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{i}+5$ for $\mathrm{i}=2 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-3$ for $\mathrm{i}=3 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+\mathrm{i}+5$ for $\mathrm{i}=4$; $f\left(v_{i}\right)=m+i+3$ for $i=5 ; \quad f\left(v_{i}\right)=i-1$ for $i=6 ; f\left(w_{j}\right)=j+5$ for $1 \leq j \leq m ;$ $\mathrm{f}\left(\mathrm{u}_{\mathrm{k}}\right)=\mathrm{m}+\mathrm{k}+8$ for $1 \leq \mathrm{k} \leq \mathrm{n} ; \mathrm{f}(\mathrm{w})=\mathrm{m}+6 ; \mathrm{f}(\mathrm{u})=1$.

The induced labeling $g$ on the edges of $G$ is defined by $g\left(v_{i} v_{i+1}\right)=m+5$ for $i=1 ; g\left(v_{i} v_{i+1}\right)=m+7$ for $i=2 ; g\left(v_{i} v_{i+1}\right)=m+n+9$ for $i=3 ; g\left(v_{i} v_{i+1}\right)=m+1$ for $\mathrm{i}=4 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+3$ for $\mathrm{i}=5 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+6$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+2$ for $\mathrm{i}=2$; $g\left(w w_{j}\right)=m-j+1$ for $1 \leq j \leq m ; g\left(u u_{k}\right)=m+k+7$ for $1 \leq k \leq n ; g\left(w v_{i}\right)=m+4$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{uv}_{\mathrm{j}}\right)=\mathrm{m}+\mathrm{n}+8$ for $\mathrm{j}=4$.

## On Graceful Labeling of Some Bicyclic Graphs

The vertex labels of G can be arranged in the following order.
$A=\{0,2,5, m+7, m+8, m+n+9\}, B=\{6,7, \ldots, m+5\}, C=\{m+9, \ldots$, $\mathrm{m}+\mathrm{n}+8\}, \mathrm{I}=\{1, \mathrm{~m}+6\}$.The set of vertex labels of G is AUBUCUI $=$ $\{0,1,2,5, \ldots, m+n+9\}$.

The edge labels of G can be arranged in the following order.
$D=\{m+1, m+3, m+5, m+7, m+n+9\}, E=\{m+2, m+6\}, F=\{1,2, \ldots$, $m\}, G=\{m+8, \ldots, m+n+7\}, H=\{m+4, m+n+8\}$. The set of edge labels of $G$ is $\mathrm{D} \cup \mathrm{E} \cup \mathrm{FU} \mathrm{GU} \mathrm{H}=\{1,2,3, \ldots, \mathrm{~m}+\mathrm{n}+9\}$.

Therefore the set of vertex labels and edge labels are distinct. So $f$ is a graceful labeling. Hence $G=\theta_{14}(2,2,3) @(\operatorname{St}(m), \operatorname{St}(n))$, for $m \geq 1, n \geq 1$, is a graceful graph.

Case 2. $\alpha=1, \beta=5$.
Let the labeling f on the vertices of G be defined by $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}+3$ for $\mathrm{i}=1 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}$ $+\mathrm{i}+7$ for $\mathrm{i}=2 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-3$ for $\mathrm{i}=3 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-2$ for $\mathrm{i}=4 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+\mathrm{i}+3$ for $\mathrm{i}=5$; $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-5$ for $\mathrm{i}=6 ; \mathrm{f}\left(\mathrm{w}_{\mathrm{j}}\right)=\mathrm{j}+5$ for $1 \leq \mathrm{j} \leq m$; $\mathrm{f}\left(\mathrm{u}_{\mathrm{k}}\right)=\mathrm{m}+\mathrm{k}+7$ for $1 \leq \mathrm{k} \leq \mathrm{n}$; $f(w)=3 ; f(u)=5$.

The induced labeling $g$ on the edges of $G$ is defined by $g\left(v_{i} v_{i+1}\right)=m+n+5$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+9$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=2$ for $\mathrm{i}=3 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+6$ for $\mathrm{i}=4 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+7$ for $\mathrm{i}=5 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+\mathrm{n}+4$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+\mathrm{n}+8$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{ww}_{\mathrm{j}}\right)=\mathrm{j}+2$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{g}\left(\mathrm{uu}_{\mathrm{k}}\right)=\mathrm{m}+\mathrm{k}+2$ for $1 \leq \mathrm{k} \leq \mathrm{n} ; \mathrm{g}\left(\mathrm{wv}_{\mathrm{i}}\right)=1$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{uv} \mathrm{v}_{\mathrm{j}}\right)=\mathrm{m}+\mathrm{n}+3$ for $\mathrm{j}=5$.

The vertex labels of $G$ can be arranged in the following order. $A=\{0,1,2,4, m+n+8, m+n+9\}, B=\{6,7, \ldots, m+5\}, C=\{m+8, \ldots, m+n+7\}$, $I=\{3,5\}$. The set of vertex labels of $G$ is $A \cup B \cup C U I=\{0,1,2, \ldots, m+5, m+8, \ldots$, $m+n+9\}$.

The edge labels of G can be arranged in the following order.
$\mathrm{D}=\{2, \mathrm{~m}+\mathrm{n}+5, \mathrm{~m}+\mathrm{n}+6, \mathrm{~m}+\mathrm{n}+7, \mathrm{~m}+\mathrm{n}+9\}, \mathrm{E}=\{\mathrm{m}+\mathrm{n}+4, \mathrm{~m}+\mathrm{n}+8\}$, $F=\{3,4, \ldots, m+2\}, G=\{m+3, \ldots, m+n+2\}, H=\{1, m+n+3\}$. The set of edge labels of $G$ is $D \cup E \cup F \cup G \cup H=\{1,2,3, \ldots, m+n+9\}$.

Therefore the set of vertex labels and edge labels are distinct. So f is a graceful labeling. Hence $G=\theta_{15}(2,2,3) @(\operatorname{St}(m), \operatorname{St}(n))$, for $m \geq 1, n \geq 1$, is a graceful graph.

Case 3. $\alpha=1, \beta=6$.
Let the labeling $f$ on the vertices of $G$ be defined by $f\left(v_{i}\right)=i+3$ for $i=1 ; f\left(v_{i}\right)=i$ for $\mathrm{i}=2 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+\mathrm{i}+3$ for $\mathrm{i}=3 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-4$ for $\mathrm{i}=4 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+\mathrm{i}+4$ for $\mathrm{i}=5$; $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-5$ for $\mathrm{i}=6 ; \mathrm{f}\left(\mathrm{w}_{\mathrm{j}}\right)=\mathrm{j}+4$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{f}\left(\mathrm{u}_{\mathrm{k}}\right)=\mathrm{m}+\mathrm{k}+5$ for $1 \leq \mathrm{k} \leq \mathrm{n}$; $\mathrm{f}(\mathrm{w})=\mathrm{m}+\mathrm{n}+7 ; \mathrm{f}(\mathrm{u})=\mathrm{m}+\mathrm{n}+8$.

The induced labeling $g$ on the edges of $G$ is defined by $g\left(v_{i} v_{i+1}\right)=2$ for $i=1$; $g\left(v_{i} v_{i+1}\right)=m+n+4$ for $i=2 ; g\left(v_{i} v_{i+1}\right)=m+n+6$ for $i=3 ; g\left(v_{i} v_{i+1}\right)=m+n+9$ for $\mathrm{i}=4 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+8$ for $\mathrm{i}=5 ; \quad \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+\mathrm{n}+5$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=1$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{ww}_{\mathrm{j}}\right)=\mathrm{m}+\mathrm{n}-\mathrm{j}+3$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{g}\left(\mathrm{uu}_{\mathrm{k}}\right)=\mathrm{n}-\mathrm{k}+3$ for $1 \leq \mathrm{k} \leq \mathrm{n}$; $\mathrm{g}\left(\mathrm{wv}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+3$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{uv}_{\mathrm{j}}\right)=\mathrm{m}+\mathrm{n}+7$ for $\mathrm{j}=6$.

The vertex labels of $G$ can be arranged in the following order.

## R.Shahul Hameed, M.Palanivelrajan, K.Gunasekaran and R. Raziya Begam

$A=\{0,1,2,4, m+n+6, m+n+9\}, B=\{5,6,7, \ldots, m+4\}, C=\{m+6, \ldots, m+n+5\}$, $\mathrm{I}=\{\mathrm{m}+\mathrm{n}+7, \quad \mathrm{~m}+\mathrm{n}+8\}$. The set of vertex labels of $G$ is $\mathrm{AUBUCUI}=\{0,1,2,4, \ldots$, $m+4, m+6, \ldots, m+n+9\}$.

The edge labels of G can be arranged in the following order.
$\mathrm{D}=\{2, \mathrm{~m}+\mathrm{n}+4, \mathrm{~m}+\mathrm{n}+6, \mathrm{~m}+\mathrm{n}+8, \mathrm{~m}+\mathrm{n}+9\}, \mathrm{E}=\{1, \mathrm{~m}+\mathrm{n}+5\}$, $\mathrm{F}=\{\mathrm{n}+3, \ldots, \mathrm{~m}+\mathrm{n}+2\}, \mathrm{G}=\{3, \ldots, \mathrm{~m}+\mathrm{n}+2\}, \mathrm{H}=\{\mathrm{m}+\mathrm{n}+3, \mathrm{~m}+\mathrm{n}+7\}$. The set of edge labels of $G$ is $D \cup E \cup F \cup G \cup H=\{1,2,3, \ldots, m+n+9\}$.

Therefore the set of vertex labels and edge labels are distinct. So f is a graceful labeling. Hence, $G=\theta_{16}(2,2,3) @(\operatorname{St}(\mathrm{~m}), \mathrm{St}(\mathrm{n}))$, for $\mathrm{m} \geq 1, \mathrm{n} \geq 1$, is a graceful graph.

Case 4. $\alpha=2, \beta=4$.
Let the labeling $f$ on the vertices of $G$ be defined by $f\left(v_{i}\right)=i-1$ for $i=1 ; f\left(v_{i}\right)=m+n+$ $6+i$ for $i=2 ; f\left(v_{i}\right)=i+1$ for $i=3 ; f\left(v_{i}\right)=n+2+i$ for $i=4 ; f\left(v_{i}\right)=m+n+i+4$ for $\mathrm{i}=5 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-4$ for $\mathrm{i}=6 ; \mathrm{f}\left(\mathrm{w}_{\mathrm{j}}\right)=\mathrm{n}+\mathrm{j}+6$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{f}\left(\mathrm{u}_{\mathrm{k}}\right)=\mathrm{k}+5$ for $1 \leq \mathrm{k} \leq \mathrm{n}$; $f(w)=3 ; f(u)=5$.

The induced labeling $g$ on the edges of $G$ is defined by $g\left(v_{i} v_{i+1}\right)=m+n+8$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+4$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{n}+2$ for $\mathrm{i}=3 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{n}+3$ for $\mathrm{i}=4$; $g\left(v_{i} v_{i+1}\right)=m+n+7$ for $i=5 ; g\left(v_{i} v_{i+4}\right)=m+n+9$ for $i=1 ; g\left(v_{i} v_{i+4}\right)=m+n+6$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{ww}_{\mathrm{j}}\right)=\mathrm{n}+\mathrm{j}+3$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{g}\left(\mathrm{uu}_{\mathrm{k}}\right)=\mathrm{k}$ for $1 \leq \mathrm{k} \leq \mathrm{n} ; \mathrm{g}\left(\mathrm{wv}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+5$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{uv} v_{\mathrm{j}}\right)=\mathrm{n}+1$ for $\mathrm{j}=4$.

The vertex labels of G can be arranged in the following order.
$A=\{0,2,4, n+6, m+n+8, m+n+9\}, B=\{n+7, m+n+6\}, C=\{6,7, \ldots$, $n+5\}, I=\{3,5\}$. The set of vertex labels of $G$ is AUBUCUI $=\{0,2, \ldots, m+n+6$, $m+n+8, m+n+9\}$.

The edge labels of G can be arranged in the following order.
$\mathrm{D}=\{\mathrm{n}+2, \mathrm{n}+3, \mathrm{~m}+\mathrm{n}+4, \mathrm{~m}+\mathrm{n}+7, \mathrm{~m}+\mathrm{n}+8\}, \quad \mathrm{E}=\{\mathrm{m}+\mathrm{n}+6$, $m+n+9\}, F=\{n+4, \ldots, m+n+3\}, G=\{1,2, \ldots, n\}, H=\{n+1, m+n+5\}$. The set of edge labels of $G$ is $D \cup E \cup F \cup G \cup H=\{1,2,3, \ldots, m+n+9\}$.

Therefore the set of vertex labels and edge labels are distinct. So f is a graceful labeling. Hence $G=\theta_{24}(2,2,3) @(\operatorname{St}(\mathrm{~m}), \mathrm{St}(\mathrm{n}))$, for $\mathrm{m} \geq 1, \mathrm{n} \geq 1$, is a graceful graph.

Case 5. $\alpha=2, \beta=5$.
Let the labeling $f$ on the vertices of $G$ be defined by $f\left(v_{i}\right)=i-1$ for $i=1 ; f\left(v_{i}\right)=m+n+$ $i+7$ for $i=2 ; f\left(v_{i}\right)=n+i+3$ for $i=3 ; f\left(v_{i}\right)=m+n+i+4$ for $i=4 ; f\left(v_{i}\right)=m+n+i$ +2 for $i=5 ; f\left(v_{i}\right)=i-5$ for $i=6 ; f\left(w_{j}\right)=j+5$ for $1 \leq j \leq m ; f\left(u_{k}\right)=m+k+6$ for $1 \leq \mathrm{k} \leq \mathrm{n} ; \mathrm{f}(\mathrm{w})=4 ; \mathrm{f}(\mathrm{u})=3$.

The induced labeling $g$ on the edges of $G$ is defined by $g\left(v_{i} v_{i+1}\right)=m+n+9$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+3$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+2$ for $\mathrm{i}=3 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=1$ for $\mathrm{i}=4$; $g\left(v_{i} v_{i+1}\right)=m+n+6$ for $\mathrm{i}=5 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+\mathrm{n}+7$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+\mathrm{n}+8$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{ww}_{\mathrm{j}}\right)=\mathrm{j}+1$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{g}\left(\mathrm{uu}_{k}\right)=\mathrm{m}+\mathrm{k}+3$ for $1 \leq \mathrm{k} \leq \mathrm{n} ; \mathrm{g}\left(\mathrm{wv}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+5$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{uv}_{\mathrm{j}}\right)=\mathrm{m}+\mathrm{n}+4$ for $\mathrm{j}=5$.

The vertex labels of G can be arranged in the following order.
$A=\{0,1, n+6, m+n+7, m+n+8, m+n+9\}, B=\{6,7, \ldots, m+5\}$, $C=\{m+7, \ldots, m+n+6\}, I=\{3,4\}$.The set of vertex labels of $G$ is AUBUCUI $=\{0$, $1,3,4,6, \ldots, m+n+9\}$.

## On Graceful Labeling of Some Bicyclic Graphs

The edge labels of G can be arranged in the following order.
$\mathrm{D}=\{1, \mathrm{~m}+2, \mathrm{~m}+3, \mathrm{~m}+\mathrm{n}+6, \mathrm{~m}+\mathrm{n}+9\}, \mathrm{E}=\{\mathrm{m}+\mathrm{n}+7, \mathrm{~m}+\mathrm{n}+8\}$, $\mathrm{F}=\{2,3, \ldots, \mathrm{~m}+1\}, \mathrm{G}=\{\mathrm{m}+4, \ldots, \mathrm{~m}+\mathrm{n}+3\}, \mathrm{H}=\{\mathrm{m}+\mathrm{n}+4, \mathrm{~m}+\mathrm{n}+5\}$. The set of edge labels of $G$ is $D \cup E \cup F \cup G \cup H=\{1,2,3, \ldots, m+n+9\}$.

Therefore the set of vertex labels and edge labels are distinct. So f is a graceful labeling. Hence $\mathrm{G}=\theta_{25}(2,2,3) @(\operatorname{St}(\mathrm{~m}), \mathrm{St}(\mathrm{n}))$, for $\mathrm{m} \geq 1, \mathrm{n} \geq 1$, is a graceful graph.

Case 6. $\alpha=3, \beta=4$.
Let the labeling f on the vertices of G be defined by $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-1$ for $\mathrm{i}=1 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+$ $\mathrm{i}+6$ for $\mathrm{i}=2 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{n}+\mathrm{i}+4$ for $\mathrm{i}=3 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}$ for $\mathrm{i}=4 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+4+\mathrm{i}$ for $\mathrm{i}=5$; $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-4$ for $\mathrm{i}=6 ; \mathrm{f}\left(\mathrm{w}_{\mathrm{j}}\right)=\mathrm{m}+\mathrm{j}+7$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{f}\left(\mathrm{u}_{\mathrm{k}}\right)=\mathrm{k}+5$ for $1 \leq \mathrm{k} \leq \mathrm{n}$; $\mathrm{f}(\mathrm{w})=3 ; \mathrm{f}(\mathrm{u})=\mathrm{n}+6$.

The induced labeling $g$ on the edges of $G$ is defined by $g\left(v_{i} v_{i+1}\right)=m+n+8$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{n}+1$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{n}+3$ for $\mathrm{i}=3 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+5$ for $\mathrm{i}=4$; $g\left(v_{i} v_{i+1}\right)=m+n+7$ for $\mathrm{i}=5$; $\mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+\mathrm{n}+9$ for $\mathrm{i}=1$; $\mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+\mathrm{n}+6$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{ww}_{\mathrm{j}}\right)=\mathrm{m}+\mathrm{j}+4$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{g}\left(\mathrm{uu}_{\mathrm{k}}\right)=\mathrm{n}-\mathrm{k}+1$ for $1 \leq \mathrm{k} \leq \mathrm{n} ; \mathrm{g}\left(\mathrm{wv}_{\mathrm{i}}\right)=\mathrm{n}+4$ for $\mathrm{i}=3 ; \mathrm{g}\left(\mathrm{uv}_{\mathrm{j}}\right)=\mathrm{n}+2$ for $\mathrm{j}=4$.

The vertex labels of G can be arranged in the following order.
$A=\{0,2,4, n+7, m+n+8, m+n+9\}, B=\{n+8, \ldots, m+n+7\}$, $\mathrm{C}=\{6,7, \ldots, \mathrm{n}+5\}, \mathrm{I}=\{3, \mathrm{n}+6\}$. The set of vertex labels of G is $\mathrm{AUBUCUI}=\{0$, $2,3,4,6, \ldots, m+n+9\}$.

The edge labels of G can be arranged in the following order.
$\mathrm{D}=\{\mathrm{n}+1, \mathrm{n}+3, \mathrm{~m}+\mathrm{n}+5, \mathrm{~m}+\mathrm{n}+7, \mathrm{~m}+\mathrm{n}+8\}, \mathrm{E}=\{\mathrm{m}+\mathrm{n}+6$, $m+n+9\}, F=\{n+5, \ldots, m+n+4\}, G=\{1,2, \ldots, n\}, H=\{n+2, n+4\}$. The set of edge labels of $G$ is $D \cup E \cup F \cup G U H=\{1,2,3, \ldots, m+n+9\}$.

Therefore the set of vertex labels and edge labels are distinct. So f is a graceful labeling. Hence $G=\theta_{34}(2,2,3) @(\operatorname{St}(\mathrm{~m}), \mathrm{St}(\mathrm{n}))$, for $\mathrm{m} \geq 1, \mathrm{n} \geq 1$, is a graceful graph.

Case 7. $\alpha=4, \beta=5$.
Let the labeling $f$ on the vertices of $G$ be defined by $f\left(v_{i}\right)=i$ for $i=1 ; f\left(v_{i}\right)=m+n+$ $\mathrm{i}+7$ for $\mathrm{i}=2 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-3$ for $\mathrm{i}=3 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-2$ for $\mathrm{i}=4,6 ; \mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+\mathrm{i}+3$ for $\mathrm{i}=5 ; \mathrm{f}\left(\mathrm{w}_{\mathrm{j}}\right)=\mathrm{j}+5$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{f}\left(\mathrm{u}_{\mathrm{k}}\right)=\mathrm{m}+\mathrm{k}+7$ for $1 \leq \mathrm{k} \leq \mathrm{n} ; \mathrm{f}(\mathrm{w})=3 ; \mathrm{f}(\mathrm{u})=5$.

The induced labeling $g$ on the edges of $G$ is defined by $g\left(v_{i} v_{i+1}\right)=m+n+8$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+9$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=2$ for $\mathrm{i}=3 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+6$ for $\mathrm{i}=4 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+4$ for $\mathrm{i}=5 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+\mathrm{n}+7$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+\mathrm{n}+5$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{ww} \mathrm{w}_{\mathrm{j}}\right)=\mathrm{j}+2$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{g}\left(\mathrm{uu} \mathrm{u}_{\mathrm{k}}\right)=\mathrm{m}+\mathrm{k}+2$ for $1 \leq \mathrm{k} \leq \mathrm{n} ; \mathrm{g}\left(\mathrm{wv} v_{\mathrm{i}}\right)=1$ for $\mathrm{i}=4 ; \mathrm{g}\left(\mathrm{uv}_{\mathrm{j}}\right)=\mathrm{m}+\mathrm{n}+3$ for $\mathrm{j}=5$.

The vertex labels of $G$ can be arranged in the following order.
$A=\{0,1,2,4, m+n+8, m+n+9\}, B=\{6, \ldots, m+5\}, C=\{m+8, \ldots, m+n$ $+7\}, \mathrm{I}=\{3,5\}$. The set of vertex labels of G is $\mathrm{AUBUCUI}=\{0,1, \ldots, \mathrm{~m}+5$, $m+8, \ldots, m+n+9\}$.

The edge labels of G can be arranged in the following order.
$\mathrm{D}=\{2, \mathrm{~m}+\mathrm{n}+4, \mathrm{~m}+\mathrm{n}+6, \mathrm{~m}+\mathrm{n}+8, \mathrm{~m}+\mathrm{n}+9\}, \mathrm{E}=\{\mathrm{m}+\mathrm{n}+5, \mathrm{~m}+\mathrm{n}+7\}$, $F=\{3,4, \ldots, m+2\}, G=\{m+3, \ldots, m+n+2\}, H=\{1, m+n+3\}$. The set of edge labels of $G$ is $D \cup E \cup F \cup G \cup H=\{1,2,3, \ldots, m+n+9\}$.

## R.Shahul Hameed, M.Palanivelrajan, K.Gunasekaran and R. Raziya Begam

Therefore the set of vertex labels and edge labels are distinct. So f is a graceful labeling. Hence $G=\theta_{45}(2,2,3) @(\operatorname{St}(m), \operatorname{St}(n))$, for $m \geq 1, n \geq 1$, is a graceful graph.

Case 8. $\alpha=4, \beta=6$.
Let the labeling $f$ on the vertices of $G$ be defined by $f\left(v_{i}\right)=i-1$ for $i=1,6 ; f\left(v_{i}\right)=m+$ $n+i+7$ for $\mathrm{i}=2 ; f\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{i}-2$ for $\mathrm{i}=3,5 ; f\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+\mathrm{i}+4$ for $\mathrm{i}=4 ; \mathrm{f}\left(\mathrm{w}_{\mathrm{j}}\right)=\mathrm{j}+5$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{f}\left(\mathrm{u}_{\mathrm{k}}\right)=\mathrm{m}+\mathrm{k}+7$ for $1 \leq \mathrm{k} \leq \mathrm{n} ; \mathrm{f}(\mathrm{w})=2 ; \mathrm{f}(\mathrm{u})=4$.

The induced labeling $g$ on the edges of $G$ is defined by $g\left(v_{i} v_{i+1}\right)=m+n+9$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+8$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+7$ for $\mathrm{i}=3 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+$ 5 for $\mathrm{i}=4 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=2$ for $\mathrm{i}=5 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=3$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+\mathrm{n}+4$ for $\mathrm{i}=2$; $g\left(w w_{j}\right)=j+3$ for $1 \leq j \leq m ; g\left(u u_{k}\right)=m+k+3$ for $1 \leq k \leq n ; g\left(w v_{i}\right)=m+n+6$ for $i=4 ; g\left(u v_{j}\right)=1$ for $j=6$.

The vertex labels of G can be arranged in the following order.
$A=\{0,1,3,5, m+n+8, m+n+9\}, B=\{6,7, \ldots, m+5\}, C=\{m+8, \ldots, m+n+$ $7\}, I=\{2,4\}$. The set of vertex labels of $G$ is $A \cup B \cup C \cup I=\{0,1, \ldots, m+5$, $m+8, \ldots, m+n+9\}$.

The edge labels of G can be arranged in the following order.
$D=\{2, m+n+5, m+n+7, m+n+8, m+n+9\}, E=\{3, m+n+4\}$, $F=\{4,5, \ldots, m+3\}, \quad G=\{m+4, \ldots, m+n+3\}, H=\{1, m+n+6\}$. The set of edge labels of $G$ is $D \cup E \cup F \cup G \cup H=\{1,2,3, \ldots, m+n+9\}$.

Therefore the set of vertex labels and edge labels are distinct. So f is a graceful labeling. Hence $G=\theta_{46}(2,2,3) @(\operatorname{St}(\mathrm{~m}), \operatorname{St}(\mathrm{n}))$, for $\mathrm{m} \geq 1, \mathrm{n} \geq 1$, is a graceful graph.

Case 9. $\alpha=5, \beta=6$.
Let the labeling f on the vertices of $G$ be defined by $f\left(v_{i}\right)=i-1$ for $i=1 ; f\left(v_{i}\right)=m+n+$ $i+7$ for $i=2 ; f\left(v_{i}\right)=i+1$ for $i=3 ; f\left(v_{i}\right)=i-3$ for $i=4 ; f\left(v_{i}\right)=m+n+i+3$ for $i=5$; $\mathrm{f}\left(\mathrm{v}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+\mathrm{i}+1$ for $\mathrm{i}=6 ; \mathrm{f}\left(\mathrm{w}_{\mathrm{j}}\right)=\mathrm{j}+5$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{f}\left(\mathrm{u}_{\mathrm{k}}\right)=\mathrm{m}+\mathrm{k}+6$ for $1 \leq \mathrm{k} \leq \mathrm{n}$; $f(w)=2 ; f(u)=3$.

The induced labeling $g$ on the edges of $G$ is defined by $g\left(v_{i} v_{i+1}\right)=m+n+9$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+5$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=3$ for $\mathrm{i}=3 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+7$ for $\mathrm{i}=4 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+1}\right)=1$ for $\mathrm{i}=5 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=\mathrm{m}+\mathrm{n}+8$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}+4}\right)=2$ for $\mathrm{i}=2$; $\mathrm{g}\left(\mathrm{ww}_{\mathrm{j}}\right)=\mathrm{j}+3$ for $1 \leq \mathrm{j} \leq \mathrm{m} ; \mathrm{g}\left(\mathrm{uu}_{\mathrm{k}}\right)=\mathrm{m}+\mathrm{k}+3$ for $1 \leq \mathrm{k} \leq \mathrm{n} ; \mathrm{g}\left(\mathrm{wv}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+6$ for $\mathrm{i}=5 ; \mathrm{g}\left(\mathrm{uv} \mathrm{v}_{\mathrm{j}}\right)=\mathrm{m}+\mathrm{n}+4$ for $\mathrm{j}=6$.

The vertex labels of G can be arranged in the following order.
$A=\{0,1,4, m+n+7, m+n+8, m+n+9\}, B=\{6,7, \ldots, m+5\}$, $C=\{m+7, \ldots, m+n+6\}, I=\{2,3\}$. The set of vertex labels of G is AUBUCUI $=\{0,1,2,3,4,6, \ldots, m+5, m+7, \ldots, m+n+9\}$.

The edge labels of G can be arranged in the following order.
$\mathrm{D}=\{1,3, \mathrm{~m}+\mathrm{n}+5, \mathrm{~m}+\mathrm{n}+7, \mathrm{~m}+\mathrm{n}+9\}, \mathrm{E}=\{2, \mathrm{~m}+\mathrm{n}+8\}, \mathrm{F}=\{4,5, \ldots$, $m+3\}, G=\{m+4, \ldots, m+n+3\}, H=\{m+n+4, m+n+6\}$. The set of edge labels of $G$ is $D \cup E \cup F \cup G \cup H=\{1,2,3, \ldots, m+n+9\}$.

Therefore the set of vertex labels and edge labels are distinct. So f is a graceful labeling. Hence $G=\theta_{56}(2,2,3) @(\operatorname{St}(m), \operatorname{St}(n))$, for $m \geq 1, n \geq 1$, is a graceful graph.

## On Graceful Labeling of Some Bicyclic Graphs

Definition 2.5. Let $1 \geq 1, \mathrm{~m} \geq 1, \mathrm{n} \geq 0$, be integers. Consider a path on l (odd) vertices $\mathbf{u}_{1}, \mathbf{u}_{2}, \ldots, \mathbf{u}_{1}$. Let $\mathrm{d}=(\mathrm{l}+1) / 2$. Join the vertices $\mathrm{u}_{1}, \mathrm{u}_{2}, \mathbf{u}_{\mathrm{d}}$ to a vertex t by means of the edges $\mathrm{u}_{1} \mathrm{t}, \mathrm{u}_{\mathrm{d}} \mathrm{t}$ and $\mathrm{u}_{1} \mathrm{t}$, to form a bicyclic graph. Attach a pendant vertex $\mathrm{v}_{\mathrm{m}}$ of a path $\mathrm{v}_{1}, \mathrm{v}_{2}, \ldots, \mathrm{v}_{\mathrm{m}}$ to $t$ and rename it as $t$. Let $\operatorname{St}(\mathrm{n})$ be a star graph with center $w$ and pendant vertices $\mathrm{w}_{1}, \mathrm{w}_{2}, \ldots, \mathrm{w}_{\mathrm{n}}$. Fix the center w of $\mathrm{St}(\mathrm{n})$ with t and rename it as t . The new graph formed is called $\mathrm{F}(1, \mathrm{~m}, \mathrm{n})$ and it has $(1+\mathrm{m}+\mathrm{n})$ vertices and $(1+\mathrm{m}+\mathrm{n}+1)$ edges.

Theorem 2.6. $\mathrm{F}(1, \mathrm{~m}, \mathrm{n})$ is graceful, for $\mathrm{l}=3, \mathrm{~m} \geq 1$ and $\mathrm{n} \geq 0$.
Proof. Consider the graph $G=F(1, m, n)$ with $1=3, m \geq 1, n \geq 0$. $G$ has $(m+n+3)$ vertices and ( $m+n+4$ ) edges.

The vertex set $V(G)=\left\{u_{i}, v_{j}, w_{k}, t / i=1,2, \ldots, l, j=1,2, \ldots, m-1, k=1,2, \ldots, n\right\}$. The edge set $\mathrm{E}(\mathrm{G})=\left\{\mathrm{tu}_{\mathrm{i}} / \mathrm{i}=1, \mathrm{~d}, \mathrm{l}\right\} \cup\left\{\mathrm{tv}_{\mathrm{m}-1}\right\} \cup\left\{\mathrm{tw}_{\mathrm{k}} / \mathrm{k}=1,2, \ldots, \mathrm{n}\right\} \cup\left\{\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1} / \mathrm{i}=1,2, \ldots\right.$, $1-1\} \cup\left\{v_{j} \mathrm{v}_{\mathrm{j}+1} / \mathrm{j}=1,2, \ldots, \mathrm{~m}-2\right\}$

Let $f$ be the labeling on the set of vertices of $G$ and $g$ be the induced labeling on the set of edges of $G$. The vertex label set of $G$ can be written as AUBUCUD where $A=\left\{f\left(u_{i}\right) / i=1,2, \ldots, 1\right\}, B=\left\{f\left(v_{j}\right) / j=1,2, \ldots, m-1\right\}, C=\left\{f\left(w_{k}\right) / k=1,2, \ldots, n\right\}$, $D=\{f(t)\}$.

The edge label set of $G$ can be written as FUGUHUIUJ where $\mathrm{F}=\left\{\mathrm{g}\left(\mathrm{tu}_{\mathrm{i}}\right)\right.$ / $\left.\mathrm{i}=1, \mathrm{~d}, \mathrm{l}\}, \mathrm{G}=\left\{\mathrm{g}\left(\mathrm{tv}_{\mathrm{m}-1}\right)\right\}, \mathrm{H}=\left\{\mathrm{g}\left(\operatorname{tw}_{\mathrm{k}}\right) / \mathrm{k}=1,2, \ldots, \mathrm{n}\right\}\right\}, \mathrm{I}=\left\{\mathrm{g}\left(\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right) / \mathrm{i}=1,2, \ldots, 1-1\right\}$, $J=\left\{g\left(v_{j} v_{j+1}\right) / j=1,2, \ldots, m-2\right\}$.

Let the labeling $f$ on the vertices of $G$ be defined by $f\left(u_{i}\right)=m+n+i+2$ for $\mathrm{i}=1 ; \mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{i}-2$ for $\mathrm{i}=2 ; \mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+\mathrm{i}+1$ for $\mathrm{i}=3 ; \mathrm{f}\left(\mathrm{w}_{\mathrm{k}}\right)=\mathrm{k}$ for $1 \leq \mathrm{k} \leq \mathrm{n}$; $\mathrm{f}(\mathrm{t})=\mathrm{m}+\mathrm{n}+2$.

If m is odd, $\mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)=\mathrm{f}\left(\mathrm{v}_{2 \mathrm{~h}+1}\right)=(2 \mathrm{~h}+\mathrm{m}+2 \mathrm{n}+5) / 2 \quad$ for $\mathrm{h}=0,1, \ldots,(\mathrm{~m}-3) / 2$; $\mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)=\mathrm{f}\left(\mathrm{v}_{2 \mathrm{~h}}\right)=(-2 \mathrm{~h}+\mathrm{m}+2 \mathrm{n}+1) / 2$ for $\mathrm{h}=1,2, \ldots,(\mathrm{~m}-1) / 2$;

If m is even, $\mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)=\mathrm{f}\left(\mathrm{v}_{2 \mathrm{~h}+1}\right)=(-2 \mathrm{~h}+\mathrm{m}+2 \mathrm{n}) / 2 \quad$ for $\mathrm{h}=0,1, \ldots,(\mathrm{~m}-2) / 2$; $\mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)=\mathrm{f}\left(\mathrm{v}_{2 \mathrm{~h}}\right)=(2 \mathrm{~h}+\mathrm{m}+2 \mathrm{n}+4) / 2 \quad$ for $\mathrm{h}=1,2, \ldots,(\mathrm{~m}-2) / 2$;

The induced labeling $g$ on the edges of $G$ is defined by $g\left(t u_{i}\right)=\mathrm{i}$ for $\mathrm{i}=1$; $\mathrm{g}\left(\mathrm{tu}_{\mathrm{i}}\right)=\mathrm{m}+\mathrm{n}+\mathrm{i}$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{tu}_{\mathrm{i}}\right)=\mathrm{i}-1 \quad$ for $\mathrm{i}=3 ; \mathrm{g}\left(\mathrm{tv}_{\mathrm{j}}\right)=\mathrm{j}+2$ for $\mathrm{j}=\mathrm{m}-1 ; \mathrm{g}\left(\mathrm{tw}_{\mathrm{k}}\right)$ $=\mathrm{m}+\mathrm{n}-\mathrm{k}+2$ for $1 \leq \mathrm{k} \leq \mathrm{n} ; \mathrm{g}\left(\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+3$ for $\mathrm{i}=1 ; \mathrm{g}\left(\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right)=\mathrm{m}+\mathrm{n}+4$ for $\mathrm{i}=2 ; \mathrm{g}\left(\mathrm{v}_{\mathrm{j}} \mathrm{v}_{\mathrm{j}+1}\right)=\mathrm{j}+2$ for $1 \leq \mathrm{j} \leq \mathrm{m}-2$;

The vertex labels of G can be arranged in the following order.
$\mathrm{A}=\{0, \mathrm{~m}+\mathrm{n}+3, \mathrm{~m}+\mathrm{n}+4\}$, If m is odd, $\mathrm{B}=\{\mathrm{n}+1, \ldots,(2 \mathrm{n}+\mathrm{m}-1) / 2$, $(2 n+m+5) / 2, \ldots, m+n+1\}, C=\{1,2, \ldots, n\}$, If $m$ is even, $B=\{n+1, \ldots,(2 n+m) / 2$, $(2 n+m+6) / 2, \ldots, m+n+1\}, C=\{1,2, \ldots, n\}, D=\{m+n+2\}$. The set of vertex labels of $G$ is $A \cup B \cup C \cup D=\{0,1,2,3, \quad \ldots,(2 n+m-1) / 2,(2 n+m+5) / 2, \ldots$, $m+n+3\}$ if $m$ is odd. The set of vertex labels of $G$ is $A \cup B \cup C \cup D=\{0,1,2,3, \ldots$, $(2 n+m) / 2,(2 n+m+6) / 2, \ldots, m+n+3\}$ if $m$ is even.

The edge labels of G can be arranged in the following order.
$F=\{1,2, m+n+2\}, G=\{m+1\}, H=\{m+2, \ldots, m+n+1\}, I=\{m+n+3$, $m+n+4\}, \quad J=\{3,4, \ldots, m\}$. The set of edge labels of $G$ is $F \cup G \cup H \cup I \cup J$ $=\{1,2,3, \ldots, m+n+4\}$.

Therefore the set of vertex labels and edge labels are distinct. So $f$ is a graceful labeling. Hence, $\mathrm{G}=\mathrm{F}(1, \mathrm{~m}, \mathrm{n})$ with $\mathrm{l}=3, \mathrm{~m} \geq 1, \mathrm{n} \geq 0$, is a graceful graph.
